

# Prairie Smoke

Scientific Name: *Geum triflorum*

<u>Life Cycle</u>	<u>Plant Height</u>	<u>Plant Spacing</u>	<u>Soil Moisture</u>	<u>Sun Exposure</u>	<u>Bloom Period</u>
Perennial	8 inches	6 - 8 inches	Medium/Wet - Dry	Full, Partial	April-June

The silky, flowing styles of the fruiting stage of Prairie Smoke never fail to win admirers at first sight. When setting seed, large stands of the plant create a gauzy effect that resembles smoke hovering close to the ground. Blooming in spring to early summer, Prairie Smoke will spread slowly from its roots in well-drained, dry to wet-mesic soils. It prefers full to partial sun and has a native range from the northern tier of the US through most of Canada.
